

添加pgsql远程访问 && 重启cloudera manager的pgsql

添加pgsql远程访问:

```
vi /var/lib/cloudera-scm-server-db/data/pg_hba.conf
```

重启数据库才能生效:

```
service cloudera-scm-server-db restart
```

实际上执行语句是 `sudo -u cloudera-scm pg_ctl restart -D /var/lib/cloudera-scm-server-db/data`

如果失败, 解决方法:

杀掉占用该端口的进程

```
netstat -ntp | grep 7432
```
