

Apache设置反向代理转发端口

官网文档参考 http://httpd.apache.org/docs/2.0/mod/mod_proxy.html

打开模块:

httpd.conf文件:

```
LoadModule proxy_module modules/mod_proxy.so
LoadModule proxy_http_module modules/mod_proxy_http.so
```

配置转发端口:

```
<VirtualHost *:80>
ServerName wiki.ask3.cn
ProxyPass / http://127.0.0.1:8090/
ProxyPassReverse / http://127.0.0.1:8090/
</VirtualHost>
```
