

# HBase运维实践

参考: <https://www.zybuluo.com/xtccc/note/191871>  
<http://blog.csdn.net/liliwei0213/article/details/53639275>

问题1:

not deployed on any region server

解决方法:

```
sudo -u hbase hbase hbck -fixAssignments table
```

问题2:

ERROR: There is a hole in the region chain

解决方法:

```
sudu -u hbase hbase hbck -repairHoles
```

问题3:

Region in Transition:       Regions Stuck in RIT / Region Not Deployed  
on any RS

解决方法:

根据 [HBase - Region in Transition](#):

1. Stop HBase
2. Use a zookeeper cli such as "hbase zkcli" and run "rmr /hbase" to delete the HBase znodes
3. Restart HBase. It will recreate the znodes

问题4:

执行hbase hbck -repair 后，有很多表出现region not deployed 数据  
就写不进去了

**解决方法：**

重启集群

```
sudo -u hbase hbase hbck -fixAssignments table
```
