

## Livy 多用户使用

需要在hdfs core-site.xml 配置如下代理:

```
<property>
<name>hadoop.proxyuser.livy.groups</name>
<value>*</value>
<description>Allow the superuser livy to impersonate any members of the group
group1 and group2</description>
</property>
<property>
<name>hadoop.proxyuser.livy.hosts</name>
<value>*</value>
<description>The superuser can connect only from host1 and host2 to impersonate
a user</description>
</property>
```

```
{
  "kind": "spark",
  "proxyUser": "xy_hpt",
  "conf": {
    "spark.cores.max": 1,
    "spark.executor.memory": "512m",
    "spark.yarn.queue": "bf_yarn_pool.development"
  }
}
```
