

# filebeat.yml 配置

多个topic 多个路径

```
vim /etc/filebeat/filebeat.yml
```

```
##### Filebeat Configuration Example
#####
#
##### Output
#####
# Configure what outputs to use when sending the data collected by the beat.
# Multiple outputs may be used.
#
output.kafka:
  enabled: true
  hosts:
["172.20.52.15:9092", "172.20.52.16:9092", "172.20.52.17:9092", "172.20.52.18:9092"]
  topic: "%{[file_to_topic]}"
