

hive执行日志解析， job日志解析

python读取api解析

<http://nn1:19888/ws/v1/history/mapreduce/jobs>

http://nn1:19888/ws/v1/history/mapreduce/jobs/job_1519454868369_30158/conf

```
curl --compressed -H "Accept: application/json" -X GET
```

```
"http://nn1:19888/ws/v1/history/mapreduce/jobs"
```

```
curl --compressed -H "Accept: application/json" -X
```

```
GET http://nn1:19888/ws/v1/history/mapreduce/jobs/job\_1519454868369\_30158/conf
```

解析json

CDH中，在HDFS的” /user/history/done” 目录下

在” /user/history/done” 目录下，每个job有两个文件： job. jhist和job. xml，
job. jhist是作业运行过程的详细记录，格式为json。 job. xml是作业的配置文件

如果不是json，更改一下配置：
