

# kudu , Not enough live tablet servers to create a table

```
CREATE TABLE kudu_sample_07
    > PRIMARY KEY (code)
    > STORED AS KUDU
    > AS SELECT * FROM sample_07;
```

Query: CREATE TABLE kudu\_sample\_07

PRIMARY KEY (code)

STORED AS KUDU

AS SELECT \* FROM sample\_07

ERROR: ImpalaRuntimeException: Error creating Kudu table

'impala::default.kudu\_sample\_07'

CAUSED BY: NonRecoverableException: Not enough live tablet servers to create a table with the requested replication factor 3. 1 tablet servers are alive.

这是因为kudu默认的存储副本是3，由于我这是单节点，副本只有1份（这与HDFS不同，HDFS没作此强制限制，1份副本也可以），于是到CM里面修改副本设置
