

presto配置ldap用于用户认证

参考:

<https://silvermissile.github.io/2019/07/16/presto%E9%85%8D%E7%BD%AEldap%E7%94%A8%E4>

```
vim etc/config.properties
coordinator=true
node-scheduler.include-coordinator=true
http-server.http.port=8080
query.max-memory=5GB
query.max-memory-per-node=1GB
query.max-total-memory-per-node=2GB
discovery-server.enabled=true
discovery.uri=http://10.0.221.69:8080

http-server.authentication.type=PASSWORD

http-server.https.enabled=true
http-server.https.port=8443

http-server.https.keystore.path=/etc/presto_keystore.jks
http-server.https.keystore.key=Abc123456
```

导入ldap server证书, presto 服务要想通过ldaps与ldap server通信, 必须要导入 (java的默认密码 changeit)

```
keytool -import -keystore $JAVA_HOME/jre/lib/security/cacerts -trustcacerts -alias ldap -file /root/server.crt
#password:changeit
```

验证导入成功

```
keytool -list -keystore $JAVA_HOME/jre/lib/security/cacerts
keytool -list -keystore $JAVA_HOME/jre/lib/security/cacerts | grep ldap
```

注意 第一项主机名

```
[root@cdh85-110 etc]# keytool -genkeypair -alias prestoservernew -keyalg RSA -validity 3650 -keystore presto_keystore.jks
Enter keystore password:
Re-enter new password:
What is your first and last name?
[Unknown]: cdh85-110
What is the name of your organizational unit?
[Unknown]: baofu
What is the name of your organization?
[Unknown]: ops
What is the name of your City or Locality?
[Unknown]: shanghai
What is the name of your State or Province?
[Unknown]: shanghai
What is the two-letter country code for this unit?
[Unknown]: cn
Is CN=cdh85-110, OU=baofu, O=ops, L=shanghai, ST=shanghai, C=cn correct?
[no]: yes
```

注意记得带时间, 不然证书默认3个月会过期

命令汇总:

生成jks

```
keytool -genkeypair -alias prestoservernew -keyalg RSA -validity 3650 -keystore presto_keystore_new.jks
```

导出cer证书

```
keytool -keystore $JAVA_HOME/jre/lib/security/presto_keystore_new.jks -export -alias prestoservernew -file /tmp/prestoservernew.cer
```

导入证书到truststore (java的默认密码 changeit)

```
keytool -import -keystore $JAVA_HOME/jre/lib/security/cacerts -trustcacerts -alias prestoservernew -file /tmp/prestoservernew.cer
```

删除信任证书 (java的默认密码 changeit)

```
keytool -delete -alias prestoservernew -keystore $JAVA_HOME/jre/lib/security/cacerts
```

#检查导入成功:

```
keytool \  
-keystore $JAVA_HOME/jre/lib/security/cacerts \  
-storepass changeit \  
-list
```

删除

```
keytool -delete -alias ldapservern2 -keystore $JAVA_HOME/jre/lib/security/cacerts  
#changeit
```

#查看证书

```
keytool -printcert -v -file $JAVA_HOME/jre/lib/security/dc.cer  
Owner: CN=al.al.com  
Issuer: CN=al-AL-CA-1, DC=al, DC=com
```

#查看keystore中证书条目列表

```
keytool -list -v -keystore presto_keystore_new.jks
```

这就是host文件为什么必须是al.al.com

命令行:

```
presto --server https://bigdata-2.baofoo.cn:8443 \  
--keystore-path /etc/presto_keystore.jks \  
--keystore-password Abc123456 \  
--catalog mysql \  
--schema db1 \  
--user yarn \  
--password
```

```

[root@~]# presto --server https://bigdata-2.baofoo.cn:8443 \
> --keystore-path /etc/presto/keystore.jks \
> --keystore-password Abc123456 \
> --catalog mysql \
> --schema db1 \
> --user yarn \
> --password
Password:
presto:db1> show tables;
      Table
-----
consult_configarea
consult_content
consult_contract
consult_idcardinfo
consult_record
consult_recordcount
module
module_role
role
user
user_role
(11 rows)

Query 20200518_024225_00016_8th3p, FINISHED, 1 node
Splits: 19 total, 19 done (100.00%)
0:01 [11 rows, 277B] [20 rows/s, 524B/s]
presto:db1>

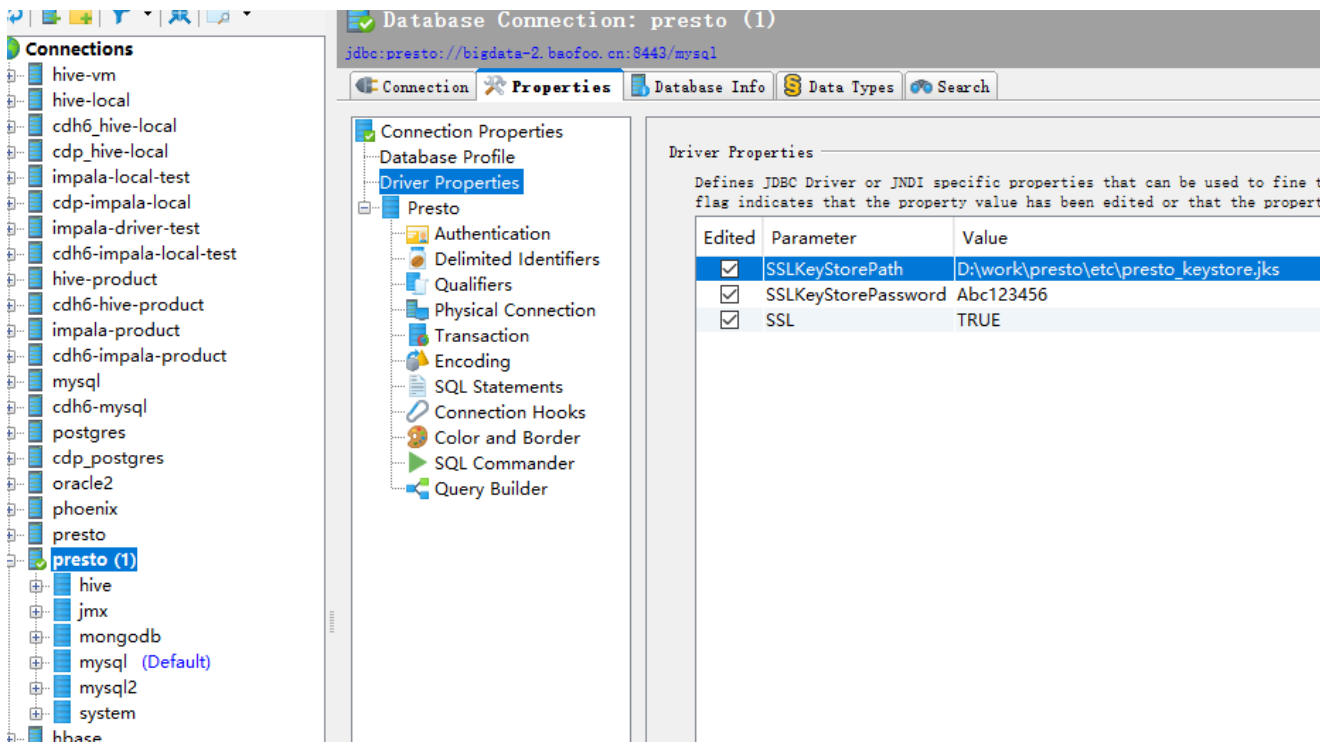

```

客户端工具

SSL

SSLKeyStorePassword

SSLKeyStorePath

技巧:

分2步操作:

1. 先注释 `http-server.authentication.type=PASSWORD` , 生成jks, 启用https 测试成功 再开启
2. 开启PASSWORD开关 导入ldap证书,
